

A totally new concept in sound absorbing products

Inspiration is a new development in timber veneer faced acoustic panels for reverberation control.

Combining the unique structural properties of the EXEL core with laminated timber veneer strips incorporating engineered structural edgings produces an exciting new concept in acoustic panels.

Suitable for both walls and ceilings **Inspiration** panels can have a span of 1200mm in width and a jointless length that offers designers unsurpassed flexibility.

Inspiration is light weight which allows for reduced ceiling support requirements and when used in conjunction with TNC's magnetic mounting technology creates fast installation times.

Inspiration panels also offer flexibility as the panels can be site modified as required.

Inspiration panels maintains EXEL's high acoustic performance, and utilizing our exclusive airflow control skins on both front and back faces allows the benefit of airspace utilization for improved absorption with no additional cost.

FEATURES

- Premium sound absorption properties
- Non wicking - avoids contamination and generation of odours
- Fire hazard complies with requirements stated in the Australian Building Code
- Lightweight
- Thermal conductivity $k=0.038$ W/mK

BENEFITS

- Light and rigid construction makes it easy to handle and install
Suitable for ceiling and wall application without sagging
- Recyclable, manufactured from 100% polyester Fibre and reconstituted timbers
- Contains no resin binders to create an odour

APPLICATIONS

- Reverberation control in architectural spaces

Interlocking joints for a seamless finish
Magnetic mountings for fast adjustable installations

Less Noise / Less Cost
